SCANNING NEWS

JULY 1986

VOLUME ONE - Issue 5 = Page 3

FROM THE GENERAL'S DESK

Les Mattson, NESN General Editor
212 West Broad Street, Paulsboro, N. J. 08066

We attempted to monitor the goings on with the Statue Of Liberty activities with our BC-300 and MONR-31 antenna to no avail. New York is just too far away from us.

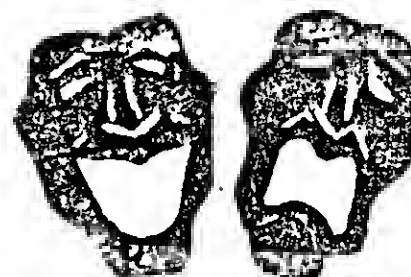

Readers will be happy to know the den/office/shack/junk room/dog house survived its annual house-cleaning!

Future issues of NESN will use a smaller-sized masthead and logo for all inner pages of the newsletter.

THE BEST OF THE PAST

When programming scanners with over 30 channels, it is suggested that you program in your "key" frequencies more than once. Here in Paulsboro, we program the County fire dispatch, 154.130, in channels #1, #11 and #21. Also, the Gloucester County main Police frequency of 158.970 is programmed in channels #2, #12 and #22. Most of the other frequencies are only programmed once except for our Paulsboro 5-1, or SWO, switchover, LG or local government freq. is programmed into channels #15 and #30.

Cheers & Jeers

CHEERS to Ginny Slick for all her fine work in behalf of RCMA. Ginny is resigning and we wish her well! We always enjoyed reading her "Thought Waves" columns.

CHEERS to Bob Grove and Larry Miller and the "new" Monitoring Times." Their July issue, with its cover in color and using stiffer paper, made for a nice-appearing and practical newsletter. We consider it an improvement!!

CHEERS to TV-6 for their fine coverage of the Statue of Liberty ceremonies.

JEERS to SCAN and their over-due Betty Bearcat frequency guide that we volunteered and worked on last Summer. (I know what you guys are thinking, but someone has to do some of the dirty work in this hobby of ours!!)

BURGLAR ALARM NUMBERING

Our town of Paulsboro, like many other towns and cities, has burglar alarms wired to a control panel in the police station. When an alarm comes in, the dispatcher radios to the cars, "Code 29 (alarm activated) at (location) 102."

Gradually, thru dispatcher carelessness, or more often due to lost alarm code lists in the squad cars, we have uncovered a good portion of the business code list. From that list we have come up with a pattern that may help you learn the same breakdown for your area.

Code 100 & up = banks and savings & loans
200 & up = private residences
300 & up = business establishments
400 & up = schools
500 & up = factories (no money on hand)
